### Subject: Additional contents on the label for CCC recognized fuses

The Certification and Accreditation Administration of the People's Republic of China (CNCA) announced that protect fuses for semiconductor devices must have a semiconductor protection symbol. This is an update to previous standards and requirements of the CNCA. In accordance with their decision, we will add the required contents to our product label as follows;

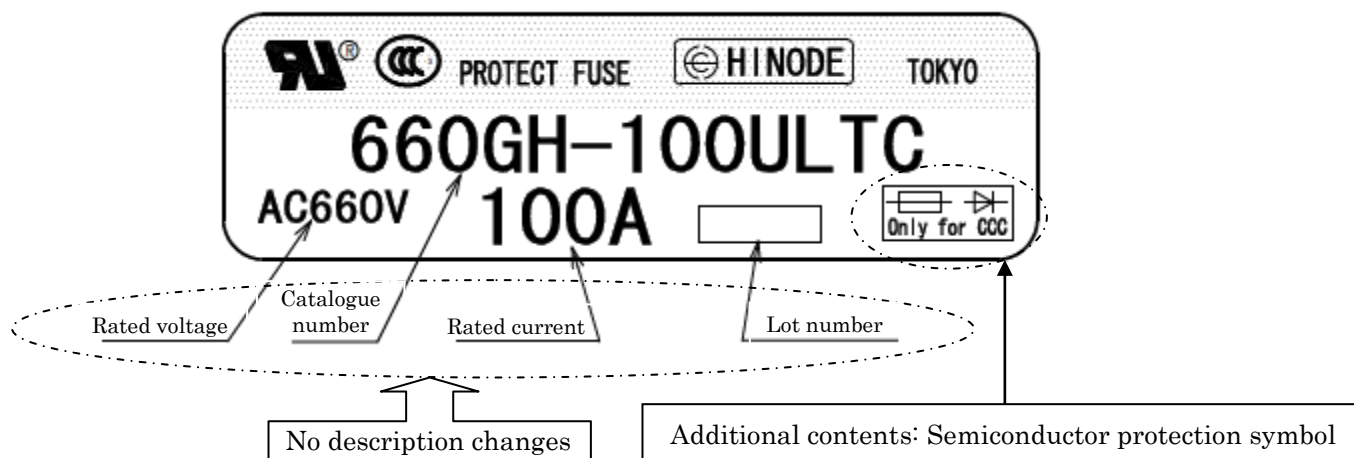

1. Products affected:

CCC recognized products in our 350GH, 660GH, 660CF, 660KH and 660KHK series  
(End of the catalogue numbers: TC, ULTC, TC-F or ULTC-F)  
For example: 660GH-100ULTC-F, 660CF-30TC, etc.

2. Reason for the change

Due to a change in CCC standards

3. Description of the change

4. Affect on products as a result of the change

- A) No change or affect on fuse itself.
- B) No changes on the label descriptions other than the additional semiconductor protection symbol.
- C) CNCA permits the use of products delivered or made before the change.
- D) Most specifications that Hinode has already been provided to our clients do not include label information; hence no changes have been made. (For clients who have the specifications with the labeling information, we will make necessary changes upon request.)

5. Schedule of change

New label will be on our products from December 2010 delivery onwards.

Thank you for your understanding in this matter.  
If you have any questions, please do not hesitate to contact us.
